C A D5763-041 CONTENT\*\*: Forward Mounting Beam and D5762-041 Aft Mounting Beam were installed on the first D5810-041 ski basket to check for fit. The D5763-041 Forward Mounting Beam fit as expected. The D5762-041 aft mounting beam was extremely tight on the mounts at both ends of the basket. An original Aero Design 78633-01-02 aft mounting beam was also tried with similar results. The drawings of the basket mounting hoop D5815 and the Aft Mounting Beam D5762 were compared to the original Aero Design drawings 94023 and 78633 respectively. The drawings were found to match. It was found that the spacing between the basket lugs and the slots in the mounting beams will set the lugs at the bottom of the top keyway and at the top of the bottom keyway at the nominal size. This does not leave enough room to easily engage the basket in the aft beam. The keyway locations in the aft beam cannot be changed as it will affect mounting of other equipment. In order to allow the Ski Basket to be installed without modifying the aft mounting beam, the spacing between the lugs on D5815 is increased from 16.88 to 16.91. This increase in spacing is at the top of the original tolerance. The increase in spacing serves to marginally reduce the loads applied to the attachments in the critical down load condition.
